

METHOD AND APPARATUS FOR PROVIDING USER SPECIFIC DOWNLINK BEAMFORMING IN A FIXED BEAM NETWORK

ABSTRACT OF THE DISCLOSURE

5 The disclosed embodiments relate to a system and method for providing user
specific beams in a fixed beam network, the fixed beam network comprising a
plurality of fixed beams, each of the plurality of fixed beams being defined by a
plurality of fixed beam correlation coefficients. The system may comprise a device
that computes reception correlation data for a received signal, and a beamformer that
10 is adapted to determine transmission weighting coefficients to be applied to a return
signal based on the difference between the reception correlation data and the fixed
beam weighting coefficients associated with at least one of the plurality of fixed
beams.
